Mobile App Development (Flutter)

WEEK 3 – Backend Integration & Database

Focus: Connect Flutter apps to APIs and databases.

Topics Covered:

- REST API integration using `http` package
- JSON parsing and displaying API data in widgets
- Local storage using `SharedPreferences`
- Firebase setup & Firestore database (Read/Write Data)
- User Authentication (Firebase Auth – Sign Up, Login, Logout)

Assignments:

1. Fetch and display data from a **Public API** (e.g., weather or news).
2. Create a **Firebase Login Page** (email & password authentication).

Mini Project:

📱 Weather Forecast App

- Connect to OpenWeather API.
- Display temperature, humidity, and weather icons for any city.
- Use loading indicators and error handling.
